From the DOZ report:

Flammability (F) Score (vH, H, M or L): H

DOZ was assigned a score of High for flammability based on information from its MSDS sheet. No other data were available.

• NIOSH 1998 –

o *DOZ is classified as a combustible chemical and should not be near open flames.*

The attached MSDS show that the flash point for DOZ is 212 deg C. This would not result in any "flammable" or "combustible" classifications that I am aware of. As with any organic chemical, it will burn, but DOZ is not subject to any hazard classifications based on its physical properties.
